Good Morning Limetree Green

How was your weekend?

We hope it wasn't too exhausting

We have more exciting activities to ignite your learning this week.

Today we will be looking at the story of Superworm by Julia Donaldson.

Here are some interesting facts about worms:

Worms are really good at recycling food. They eat vegetable and fruit peelings, eggshell and even the leaves that fall from the trees.

Worms have no eyes. But that doesn't stop them. They have special light sensors in their skin that tells them when it is light or dark.

When worms wiggle through mud and soil they make lots of holes that helps water get to the plants and help them grow.

For our activities today we will create rhyming words and phrases.

Can you remember any rhyming words from the story?

We will make paper chain worms and order them by length.

I wonder who can make the longest.

Also you will be invited to join a Superhero club. But first you need to answer a few fun questions in the Hotseat.

Enjoy your activities and please share with us your ideas on what you would like to learn.

Take good care.

From Miss Loftman.
